

```
<script>
//Q1: This program turns the background to green
// when the g key is being held down. Once it is back up it is no longer green it
is transparent
//Q2: It is waiting for the g key to be pressed and once it is,
// turn the background of the website green
window.addEventListener("keydown", event => {
  if (event.key == "g") {
    document.body.style.background = "green";
  }
});
//Q3: When the button is unpressed it turns the background to white/transparent
window.addEventListener("keyup", event => {
  if (event.key == "g") {
    document.body.style.background = "";
  }
});
</script>
```
