

1. [1,2,3,4]
2. [1,2,3,4,5,6]
3. [1,2,3]
4. Programming paradigm that focuses on the steps and how the program will achieve the task
5. paradigm that focuses on what needs to be accomplished without describing how and letting the computer determine the rest
6. The use of objects that have data and specific methods to manipulate data allowing for more modular code
7. Turning a problem into a bunch of functions that will then manipulate the data together to achieve the desired result
